Download PDF.Structural features of total rabbit sperm acrosin. Total acrosin was purified from rabbit sperm and the purified enzyme was characterized by sedimentation equilibrium ultracentrifugation and by electrophoresis in the presence and absence of SDS. The molecular weight of acrosin (MW = 85000) was estimated by sedimentation equilibrium ultracentrifugation, and by chromatofocusing. The isoelectric point of acrosin was estimated to be 5.2. The purified enzyme possessed an Mr of 85,000, similar
